

## (57) ABSTRACT

A wrapping packaging machine (10) for the wrapping of an object (11), comprising a track (20) having the shape of a closed loop. The track carries a wrapping film (42) feed device (40) placed in conjunction with an elongated body (30), such as a flexible band or chain. The object is moved by a drive (21) provided in conjunction with the track, by using friction or a tothing (32). The track is openable, allowing one track half (20a) to be moved or turned aside to permit a change of the flexible body and the plastic film band roll (41).
